Professional fog machines

NEU

- Tiniest fog particles, resulting very fast in opaqueness
- Also network-independent fog generation
- Heat resistant up to 250°C
- High-quality stainless steel material

E.g. ideal for
evacuation exercises!

AISCO-Turbo Filling Station®

For water + foam extinguishers

- Automatic filling
- Leaves hands and head free
- And my instruction is perfect

"Now I can refill each AISCO training extinguisher during fire protection training in only 25 seconds, on the side, without having to open the extinguishers."

- Water supply is also possible via water tank
- Refilling of water + foam possible

"Start" – 25 seconds – "ready"

NEW

The world's fastest AISCO Filling Station® for filling training fire extinguishers!

The AISCO Turbo Filling Station® fills a 9-litre training extinguisher completely with water or water/foam and compressed air in around 25 seconds – faster than you can flush an extinguisher!

For you this means:

Aside from the AISCO Turbo Filling Station®, you actually only need to take along two AISCO-Turbo® training extinguishers, no matter how many persons are being trained.

This saves you acquisition costs and you do not need to take along many extinguisher, as was the case previously.

The AISCO Turbo Filling Station® operates as quiet as a whisper and does not disturb your training.

The AISCO Turbo Filling Station® is as light as a feather, it only weighs 25 kg, and is made of high-quality stainless steel, of course.
